## Care Audits Key Features:

Completely Mobile  
Can be used without  
Wi-Fi or Internet

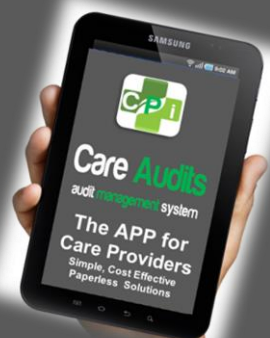

Least Skilled Operatives  
Use the App in Minutes  
Guaranteed

- The system comes with over 60 standard pre-set audits.
- You can easily edit these audits, or simply add new questions to suit individual or site specific requirements or variations to the standard.
- In addition you can digitalise your existing audits & checks, all without recourse to us or additional cost to you.
- Audits contain questions with a wide array of question types including multiple choice, comment boxes and signatures.
- Answering questions and collecting information is made slick and easy by options to select from i) Pre-set answers ii) Pre-set remedial work and iii) Free Text and iv) All with ability to seamlessly collect signatures, attach photos and date and time stamp.
- Answers to your audit can be collected using Tablets and Smartphones, Android & iOS or a Web Browser.
- The Care Audits app is completely mobile, and once logged in and synced audits are completed without Wi-Fi or Internet connection.
- Audits can be collected for multiple locations and analysed across locations.
- Non-compliances are highlighted and tracked alongside user commentary, photographic evidence and closure details.
- Information collected is held on a database to allow for the generation of questions, storing audits for review and analysis, and for tracking and managing non-compliances and remedial actions.
- The web browser has an integrated web based report writer so as well as the system standard reports you can easily design your own.
- The text within Care Audits app can be customised to use your own terminology and easily resized to suit individual user's requirements.
- The Internet (web browser) version can also be used standalone without the need for any handheld devices.
- The system can be made to replicate your business organisation structure, regardless of the number of levels involved.
- Audits can be tied to specific locations. So a site specific audit could be made to only show against that site and not against others.
- Users are given different access levels against specific locations so visibility and access rules can be flexibly defined and protected.
- Audits are scored. Questions are weighted and the system handles several degrees of compliance. The total and possible scores are held alongside the audit. Non applicable answers reduce the possible score, so percentage compliancy comparisons between locations can be made. Great for CQC comparisons.
- Audit results for locations are measured against each other in a league table.
- Overdue outstanding actions can be chased.
- A corrective action report and care audit details can be viewed on line and are emailed to recipients chosen by the care auditor.
- Corrected actions can be set to be authorised by the specified care worker / auditor / manager before they are closed.
- Photographs and signatures captured during the audit can be viewed on the secure web.

The Care Audits app's greatest benefit is as well as protecting you, your business, your clients & your staff is the 'reduction of cost & risk'.

## Care Audits Key Benefits:

- Management can easily assess if they are CQC compliant or not 24/7, each and every day.
- Management can set and undertake checks themselves ensuring highest possible standards are maintained.
- Saves time as it speeds up the auditing process. Field trials show that our paperless systems reduce audit time by at least 40%.
- Care Audit findings do not need to be entered again, so more audits can be completed in the same amount of time.
- Reduces risk - Non compliances are alerted immediately and then managed by the system and signed off correctly.
- Data collection is both unified and simplified.
- One Care Audits system can digitalise over 90% of your business.
- Real-time information is always available.
- Improves audit quality and service provided.
- Gives better visibility for users, management, clients and relatives.
- Efficient documented problem resolution.
- Significantly reduces administration, eliminating transposition errors.
- The right people are informed immediately.
- Manage non-compliances in a consistent manner.
- Photographs of non-compliances can be included in the audit.
- Sign-offs can be collected as part of the audit.
- Mix & Match Smartphone & Tablet devices make use and implementation simple protecting and minimising your investment.

## Care Audits System Options:

- We have Rentals Options to suit all organisations. For example we offer flexible monthly payments so as your needs change we flex the payments accordingly ensuring your capital is protected and invested where it is most needed.
